Caused by the presence of carbonates, bicarbonates, hydroxides, and other dissolved salts, alkalinity is important to food and beverage processors, boiler operators, and aquatic biologists. Determine phenolphthalein and total alkalinity by visual endpoint titration. Using the Digital Titrator, this contains 100 tests with a range of 10-4,000 mg/L.

**Digital Titrator and standardized titration cartridges provide laboratory accuracy for field titrations**

**Kit contains all required reagents and apparatus in a rugged carrying case for analysis in the field**
